
Ablation: at inference, only one modality is provided to LongMIL — remaining modalities are masked to zero.
LongMIL (coloured bars) and ABMIL diamonds are both evaluated on the same modality-specific test subset.
*Stars: * p<0.05 ** p<0.01 *** p<0.001 (one-sided paired t-test, LongMIL(mod) > ABMIL(mod), BH-corrected over 4 tasks × 4 modalities)*
